                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC member of the STRAP family of proteins (AAYSH)-1 is the protorype conshibit a high degree of structural conservation, but which show the significant structural homology to known human proteins. The STRAP-1 gene has been localised to chromosome 7p22 STRAP-1 is thought to be a complete the structural human tissues. Structurally, STRAP-1 is a 339 amino cells in normal human tissues. Structurally, STRAP-1 is a 339 amino cells in characterised by six transmembrane domains and contracellular N- and C-termini, suggesting that it folds in a suppose of protein characterised by six transmembrane domains and contracellular and protein expression is maintained at high levels and contracellular and protein expression is maintained at high levels and characterised protein is contraced by certain discontraced by certain is not contracted and ovarian cancer. The function of the STRAP proteins is not command. They may be ion channels (from the presence of six transmembrane commands, a feature which is shared by certain ion channels) or composed in decident of the STRAP proteins is not composed. They may be ion channels (from the presence of six transmembrane composed in decident (from the presence of six transmembrane composed in the strap proteins in municipal station with a STRAP protein induces cellular and humoral immune responses against CSTRAP-2 are cell-surface tumour antigens. Immunisation with a STRAP composis, and monitoring of cancers (or susceptibility to cancer), as therapeutic specific antibodies. The antibodies may be used for detection, prognosis, and monitoring of cancers (or susceptibility to cancer), as therapeutic combination/surface and prognositic response in the strapeutic disgunstic and prognositic response of STRAP expression and for therapeutic modulation/inhibition of STRAP expression and for therapeutic compositic response on the cell surface, they are easily targetted by systemically administered agents, and because they are expressed mainly compositic response on the cell surface.
                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

                                                                                                                                                                                                                                                                                                                                                                       S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to human six transmembrane epithelial CC annigen of the prostate (STEAP) protein. STEAP is a member of cell curface serpentine transmembrane antigens. STEAP gene is used in gene CC prostate, colon, bladder, lung, ovarian and pancreatic) expressing STEAP (comprises administering a vaccine composition to the patient. Treating CC a patient with a cancer that expresses STEAP, or inhibiting growth or killing cells expressing STEAP in a patient. Treating CC a patient with a cancer that expresses STEAP, or inhibiting growth or CC killing cells expressing STEAP, comprises administering to the patient at the vector encoding single chain monoclonal antibody that comprises the CC variable domains of the heavy and light chains of the monoclonal antibody that specifically binds to STEAP, such that the vector delivers the CC single chain monoclonal antibody coding sequence to the cancer cells and CC the encoded single chain monoclonal antibody is expressed contracellularly. The present sequence is extracellular loop of STEAP-1 CC suitable for cloning into pFC, which is used in the invention. STEAP-1 CC gene is located on chromosome Tp22.3.
                                                                                                                                                                                                                                                                                                                                                                                                        Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  microarray; cancer; leukaemia; lymphoma; myeloma

They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancer such as lymphoma, leukaemia and myeloma. The present sequence is a protein encoded by one of the probes of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence

This sequence represents a novel human protein, STRAP-1 (serpentine CC transmembrane antigen of the prostate). STRAP-1 is the prototype CC member of the STRAP family of proteins (AAY58194-Y58197) which comember of the STRAP family of proteins (AAY58194-Y58197) which show CC exhibit a high degree of structural conservation, but which show CC no significant structural homology to known human proteins. The STRAP-1 (see a cype IIIa membrane protein and is expressed predominantly in prostate CC cells in normal human tissues. Structurally, STRAP-1 is a 339 amino CC acid protein characterised by six transmembrane domains and CC "merpentine" manner into three extracellular and two intracellular loops. CC "serpentine" manner into three extracellular and two intracellular loops. CC "serpentine" manner into three extracellular and two intracellular and CC "TRAP-1 mRNA and protein expression is maintained at high levels and CC strap-1 mRNA and protein expression is maintained at high levels and CC also overexpressed in certain other cancers. STRAP-1 mRNA and/or protein is also overexpressed in certain other cancers, including bladder, colon, colon, colon, colon, and colon col
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Region

STRAP proteins may be used to identify specific-binding agents, to produce anticancer vaccines and to generate specific antibodies. The antibodies may be used for detection, prognosis, and monitoring of cancers (or susceptibility to cancer) as therapeutic inhibitors or to target therapeutic agents to their site of action. STRAP nucleic acids may be used for recombinant protein production, as diagnostic and prognostic reagents, for identifying STRAP-expressing cells for screening inhibitors of STRAP expression and for therapeutic modulation/inhibition of STRAP expression. Since high levels of STRAP proteins are exposed on the cell surface, they are easily targetted by systemically administered agents, and because they are expressed mainly on prostatic epithelial cells, agents targetted to them should have minimal side effects on other tissues.
                                                                                                                                                                                                                                                                                                                                                                                          Fanger

The invention relates to isolated prostate-specific polynucleotides, polypeptides, fusion proteins of the polypeptides antibodies raised against the polypeptides (or antigenic epitopes

The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or

The antibodies are useful for detecting the presence of cancer, especially prostate cancer. The polypeptides, polynucleotides and the antigen-presenting cells are useful for stimulating and/or expanding T cells specific for a tumour protein, and for inhibiting the development of cancer especially prostate cancer. Compositions comprising the polynucleotide and/or polypeptide are useful for stimulating an immune response, and for treating cancer. The oligonucleotide is useful for detecting cancer. The present sequence is a prostate specific polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                     Tang
Zhao
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Homo

Kalos MD,
                                                                                    antibodies to (II), fusion proteins comprising (II), and isolated T cells prepared using (I) or (II) are used treat cancer in a patient. (I) and the antibodies are also used in the detection of cancer in a patient. The cancer that is diagnosed or treated is particularly prostate cancer. (I) and (II) can be used in vaccines. The antibodies c (I) can be used for monitoring the progression of cancer in a patient. (I) and (II) can also be used to improve diagnostic and therapeutic methods for prostate cancer. They can indicate the level of metastasis as well as the prostate volume. AAH93357 to AAH93944 and AAM01115 to
                                                                                                                                                                                                                                                                                                                                            The present invention describes polynucleotide sequences (I) which enco prostate-specific proteins (II). (I) and (II) have cytostatic activity, and can be used in vaccine production and gene therapy. (I), (II), and antibodies to (II), fusion proteins comprising (II), and isolated

                     organisms such as humans or other mammals (e.g. mice, sheep and dogs). The methods of the invention are useful for diagnosing and treating prostate cancer in mammals. The prostate cancer-associated genes are useful for diagnosing or treating prostate cancer, as well as for identifying modulators of prostate cancer or agents that inhibit prostate cancer. The nucleic acid sequences are particularly useful in gene therapy, as a vaccine or in antisense applications. ABG61800-ABG61944 represent prostate cancer-associated proteins.
                                                                                                                                                                                                                                                             The present invention relates to methods of detecting a prostate cancer-associated transcript in a cell from a patient. The method comprises contacting a biological sample from the patient with prostate cancer-associated polynucleotides (designated PC genes) that selectively hybridise to a sequence that is at least 80% identical to them. The prostate cancer-associated polynucleotide sequences are differentially expressed in prostate tumour tissue or in prostate cancer and are derived from the tissues of various
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Detecting a prostate cancer-associated transcript in a cell in a patient, useful for diagnosing prostate cancer (PC) or screening modulators of PC, by determining if prostate cancer-associated genes are expressed in a prostate tissue -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     13-OCT-2000; 2000US-0687576

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention provides prostate-specific coding sequences and their encoded proteins. These can be used in the diagnosis and treatment of cancers, particularly prostate cancer. The present sequence is a protein described in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New prostate-specific polynucleotides for diagnosing and treating diseases, in particular prostate cancer, and as markers for the progression of cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Xu J, Dillon DC, Mitcham JL, Harlocker SL, Jiang Y, Fanger GR, Retter MW, Stolk JA, Day CH, Vedvick TS, Li SX, Wang A, Skeiky YAW, Hepler WT, Henderson RA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activin/inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; cytostatic; antiproliferative; vaccine; gene therapy; six transmembrane epithelial antigen of the prostate-1; STEAP-1; chromosome 7p22.3; cancer; prostate; colon; bladder; lung; ovarian;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAE02780 standard;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Note: Records for SEQ ID NO 2110 (AAK52581), (AAM80020) are omitted as the relevant pages were missing at the time of publication.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is human six transmembrane epithelial antigen of CC the prostate (STEAP): 1 protein of clone 10. STEAP is a member of cell Surface serpentine transmembrane antigens. STEAP is a member of cell CC surface serpentine transmembrane antigens. STEAP-1 gene is located on CC chromosome 7p22.3 and is used in gene therapy. Inhibiting the development CC or progression of a cancer (eg. prostate, colon, bladder, lung, ovarian CC and pancreatic) expressing STEAP or inhibiting growth or killing cells CC expressing STEAP in a patient, comprises administering a vaccine CC composition to the patient. Treating a partient with a cancer that CC expresses STEAP, or inhibiting growth or killing cells expressing STEAP, comprises administering to the patient a vector encoding single chain CC composites administering to the patient a vector encoding single chain CC composites administering to the patient a vector encoding single chain CC composites administering to the patient a vector encoding single chain conclonal antibody that comprises the variable domains of the heavy and CC sequence to the cancer cells and the encoded single chain monoclonal contibody is expressed intracellularly.

CC sequence to the cancer cells and the encoded single chain monoclonal contibody is expressed intracellularly.

CC specification, but it lacks amino acid residues at its N-terminal end.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               RESULT 15
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         given in AAY11716 to AAY11993 respectively. The proteins given represent the signal peptide and an N-terminal fragment of a secreted protein. The nucleic acid sequences can be used for producing secreted human gene products. They can also be used to develop products for diagnosis and therapy. The proteins obtained may have cytokine activity, cell proliferation and differentiation activity, haematopoiesis regulating activity, tissue growth regulating activity, reproductive hormone regulating activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, receptor/ligand activity, anti-inflammatory activity, tumour inhibition activity or other activities. The products can be used in forensic, gene therapy and chromosome mapping procedures. The sequences can also be used for obtaining corresponding promoter sequences. The nucleic acids encoding the signal peptides can be used for directing extracellular secretion of a polypeptide or the insertion of a polypeptide into a cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches

The products can be used in forensic, gene therapy and chromosome mapping procedures. The sequences can also be used for obtaining corresponding promoter sequences. The nucleic acids encoding the signal peptide can be used for obtaining corresponding the products acquences can also be used for obtaining corresponding promoter sequences. The nucleic acids encoding the signal peptide can be used for directing extracellular secretion of a polypeptide or the insertion of a polypeptide into a cell.
                                                                                                                                                                                                                                                                                                                                                                                                                    AAX41094 to AAX41347 represent 5' expressed sequence tags (ESTs) for human secreted proteins, and encode the proteins given in AAY12261 to AAY12514, respectively. The proteins given represent the signal peptit and an N-terminal fragment of a secreted protein. The nucleic acid sequences can be used for producing secreted human gene products. The can also be used to develop products for diagnosis and therapy. The

   Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Score

C - : FUNCTION: Has an important function as a repair enzyme for proteins that have been inactivated by oxidation. Catalyzes the reversible oxidation-reduction of methionine sulfoxide in proteins to methionine (By similarity).
C - : CATALYTIC ACTIVITY: Protein L-methionine + oxidized thioredoxin = C protein L-methionine S-oxide + reduced thioredoxin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

IT RECEIVES ELECTRONS FROM THE RIESKE IRON-SULFUR PROTEIN AND PASSES THEM TO PLASTOCYANIN, THIS FUNCTION IS VERY SIMILAR TO THAT OF MITOCHONDRIAL CYTOCHROME C1.
SUBUNIT: MEMBER OF THE CYTOCHROME B6/F COMPLEX INCLUDING CYTOCHROME B6, CYTOCHROME F AND PROBABLY AN IRON SULFUR PROTEIN. SUBCELLULAR LOCATION: Chloroplast thylakoid membrane (Probable). SIMILARITY: BELONGS TO THE CYTOCHROME C FAMILY.

"Positional cloning of mouse plasmacytoma susceptibility gene.";
Submitted (MAY-1999) to the EMBL/GenBank/DDBJ databases.
-i- FUNCTION: ACTS AS THE TARGET FOR THE CELL-CYCLE ARREST AND
IMMUNOSUPPRESSIVE EFFECTS OF THE FKBP12-RAPAMYCIN COMPLEX.
-i- SIMILARITY: BELONGS TO THE PI3/PI4-KINASES FAMILY.
-i- SIMILARITY: CONTAINS 8 HEAT REPEATS.
